

Suno api documentation

1. Clone the github repository using “git clone ...(git repository url)”.
2. Copy paste the “.env.example” and rename the copied file into “.env”
3. Get the cookie for the SUNO API
 - a. Head over to <http://app.suno.ai> using your browser.
 - b. Open up the browser console: hit F12 or access the Developer Tools.
 - c. Navigate to the Network tab.
 - d. Give the page a quick refresh.
 - e. Identify the request that includes the keyword client?_clerk_js_version.
 - f. Click on it and switch over to the Header tab.
 - g. Locate the Cookie section, hover your mouse over it, and copy the value of the Cookie.

(see the video demo in “get-cookie-demo.mp4”)

- h. Paste the Cookie value into “.env”

The image shows a code editor window with a dark theme. At the top, there are two tabs, both labeled '.env' with a close button (X) on the right. The active tab shows a single line of code: `1 SUNO_COOKIE="ajs_anonymous_id=b4cb3fa5-a259-404d-b0d6-4cb7d406746c; __stripe_mi"`. The text is color-coded: '1' is in light blue, 'SUNO_COOKIE' is in light blue, and the string value is in light orange.

4. Open the folder in terminal, and do “npm install”
5. Run the server using “npm run dev”
